Office of the Secretary
Federal Communications Commission
445 12th Street SW
Washington, DC 20554

Kaitlin Losansky
P.O. Box 1461
Snoqualmie, WA 98065

Dear Federal Communications Commission,

I am writing to ask you more restrictive standards for RFR exposure. There is something seriously lacking in the current standards, if my mom can be so negatively affected by cell phones, Wi-Fi, cordless phones and cell towers, etc.

I have witnessed my mom suffer in pain from Wi-Fi, cordless phones and other wireless devices as we try to sit in a restaurant, go to a hospital, try to shop, or try to visit our friends. I have seen her rebound from a general loss of strength, energy and vitality during RFR exposures to content and enthusiastic after time away from such exposures.

I have lost my home, my neighborhood, my community, and many fun activities we were involved in because we had to move away from smart meters and other people's wireless habits. My mom is a different person when she is not being poisoned by wireless radiation.

I don't understand why the FCC didn't require testing of these products before they went to market.

I don't understand why the FCC has taken steps to reclassify the pinna, or outer ear, as an extremity, which creates less strict exposure standards and less protection of public health.

I am just one of the people who will be supporting your generation in your elderly years – I would think you'd want me and my age group to be healthy and capable of leading the next generation. You are missing the big picture, by only thinking of how this will affect us now, when you should also think of how this will affect us later. Have you heard of the Iroquois Confederacy? They are one of the oldest democratic organizations in the world. Every time they made a decision, they kept in mind how it would affect the seventh generation, two to three hundred years down the road. Entertaining the interests of industry instead of protecting public health is not working for the future, just profiting in the present.

Please decrease maximum permissible exposure limits and take the advice of the 29 international experts who authored the 2012 BioInitiative Report and concluded "that exposure to EMF and radiofrequency radiation (RFR) produces biological effects and adverse health effects at levels significantly below existing public exposure standards..."

Sincerely,

Kaitlin Losansky
